The weight of the average Icelandic horse is around 350kg

The weight of the average Danish Warmblood is around 600kg.

* Electrolytes are added to the food for 'maintenance'. Therefore, you have to add some more depending depending on how hard the horse is working, how much it is sweating or are the days hot and humid.

Your horse must have access to a salt lick and adding a tablespoon of ordinary table salt into your horse's daily dose of Regulator Complete®.

REGULATOR COMPLETE / Tel. 70 22 06 76 / Email: info@regulatorcomplete.com / www.regulatorcomplete.com
